ETS Racing Fuels continues partnership with Curbstone

For the 2019 Curbstone Track and Test Day events, the ETS Racing Fuels brand will supply the control fuel and offer a complete premium on-track fuel delivery service.

Bourghtheroulde, France/ Frankfurt a.M., Germany, February 13 2019 – ETS Racing Fuels, a fuel development partner for the racing industry and a brand of HCS Group, has again been chosen as the official Curbstone partner for the upcoming circuit racing series. “The Track and Test Days are one of the most prestigious European circuits”, says Yann Labia, Global Motorsport Products Manager HCS Group, and adds: “We are excited to continue our partnership with Curbstone and offer GT and supercar drivers a great racing experience and a complete fuel delivery service.” For all European events, the ETS Racing Fuel products can be directly ordered at a special price via the Curbstone booking website.

ETS Racing Fuels are well-recognized among leading motorsport teams around the world. For the Curbstone Track & Test Days, the fuel expert will supply ExtraBlaze IRF 102, a racing fuel that has already been successfully used in many championships such as TCR Asia, UAE Formula 4 and Thailand Super Series GT Cars. This fuel offers a high consistency and engine knocking protection. It is suited for car set-up with circuit racing RON 102 engine mappings and engines equipped with ECU & lambda sensors. IRF 102 is FIA appendix J compliant.

Specific fuel components allow excellent combustion and low engine wear

ExtraBlaze IRF 102 is the ideal racing fuel for turbo-charged engines or naturally aspirated engines with a high compression ratio, as required for touring cars, supercars, GT or Formula 4. This unique racing fuel technology is based on specific additives and selected chemical molecules. It enables a thinner fuel spraying, and thereby ensures an excellent combustion performance. This makes the injection adjustment much easier and allows for a significant reduction of the

combustion temperature – which is essential in a racing engine. Thanks to specific anti-friction molecules in the fuels customers can benefit from low engine wear. Last but not least, the cleaning additive technologies used ensure that the engine parts remain extremely clean, which results in near-zero deposit.
